## RF Constant Current LED Driver

Model No．：PT－50A

Features
－Dimming interface：RF Wireless，AC Push－Dim
－Match with Skydance＇s 2.4 G single color remote control，one RF LED driver accepts up to 10 remote controls
－Universal AC input／Full range
－ 1 channel constant current output，configurable current via DIP switch
－Builtin active PFC function：0．95 Typ
－Auto－transmitting function：LED driver automatically transmit signal to another LED driver with 30 m control distance
－Synchronize on multiple number of LED drivers
－Over－heat／Over－load／Short circuit protection，recover automatically
－Full protective plastic case
－Suitable for indoor LED lighting application
－ 5 Year， 50,000 hr warranty
Mechanical Structures and Installations

|  | Output Voliage | 10－52VDC |

## Application

－Suitable for downlight，spotlight and decorative applications
－Office／Commercial／Domestic Lighting，Hotels，Classrooms，Warehouse，Health care，Retail and Display．
－Use for retrofit upgrades \＆new luminaire designs．

## 1. RF Connection

Match Remote Control (two match ways)
End user can choose the suitable match/delete ways. Two options are offered for selection

Use Match key
Match:
Short press match key, immediately press on/off key (single zone remote) or zone key (multiple zone remote) of the remote.

Delete:
Press and hold match key for 5 s to delete all match, The light blinks 5 times means all matched remotes were deleted.

## Use Power Restart

Match:
Switch off the power, then switch on power again immediately short press on/off key (single zone remote) or zone key (multiple zone remote) 3 times on the remote. The light blinks 3 times means match is successful.

Delete:
Switch off the power, then switch on power agair immediately short press on/off key (single zone remote) or zone key (multiple zone remote) 5 times on the remote. The light blinks 5 times means all matched remotes were deleted.

When use multiple RF drivers, two application method

1. All the drivers in the same zone.

Auto-transmitting: One driver can transmit the signals from the remote to another driver within 30 m ,
as long as there is a driver within 30 m , the remote control distance can be limitless.
Auto-synchronization: Multiple drivers within 30 m distance can work synchronously when they are controlled
by the same remote.
Driver placement may offer up to 30 m communication distance. Metals and other metal materials will reduce the range. Strong signal sources such as WiFi routers and microwave ovens will affect the range.
We recommend for indoor applications that driver placements should be no further apart than 15 m .
2. Each driverlone or more) in a different zone, like zone 1, 2, 3 or 4 .
2. AC Push-Dim connection

The provided AC Push-Dim interface allows for a simple dimming method using commercially available non-latching (momentary) wall switchs.

- Short press:

Turn on or off light.

- Long press ( $1-65$ ):

Press and hold to step-less dimming
With every other long press, the light level goes to the opposite direction

- Dimming memory:
figh returns to the previos $d$. 1
- Synchronization:

If more than one LED driver are connected to the same push switch, do a long press for more than 10 s , hen the system is synchronized and all lights in the group dim up to $100 \%$.
This means there is no need for any additional synchrony wire in larger installations.
We recommend the number of LED drivers connected to a push switch does not exceed 25 pieces,
The maximum length of the wires from push to IED driver should be no more than 20 meters.
